

ABSTRACT OF THE DISCLOSURE

A speaker matcher includes a plurality of selective switches, a first input terminal, a second input terminal, a plurality of power amplifying circuits, a plurality of press switches, a plurality of volume control switches, and a
5 plurality of speaker output terminals. Thus, the different rooms can select different audio sources by switching the selective switches for the different rooms so as to satisfy the requirements of different users. In addition, the different audio sources are output by the speakers for the different rooms.
